Trade Strategy Legend and Notes

- \$\$\$\$ For newer traders. Low risk, high probability trading strategy. (All traders should seriously consider.)
 - \$\$\$ For intermediate experience traders with higher margin accounts.
 - \$\$ For advanced experience traders who can endure high margin and volatility drawdowns. (NOT for newer traders.)
 - \$ Pyramid Trade. For fearless traders with pyramid trading experience and deep pockets. (NOT for newer traders.)
 - + Position contains updated information in this issue.
 - [] Items in square brackets are revised data based on new information and replaces previous data.
 - RRR Risk-Reward Ratio. Tells you how much your profit will be based on the risk amount. An RRR of 3.00 means your reward is 3x your risk. Any value less than 1.00 means you are risking more than what your potential profit is.
- All grain trades refer to CBOT contracts, all metal trades refer to COMEX/NYMEX contracts.

This publication is intended solely for educational and information purposes and is not to be construed, under any circumstances, by implication or otherwise, as an offer to sell or a solicitation to buy or sell or trade any commodities or securities herein named. No guarantee of any kind is implied or possible where projections of future

conditions are attempted. The publisher disclaims responsibility from financial losses resulting from the use of this information. In no event should the content of this document be construed as an express or implied promise, guarantee or implication by or from publisher, that you will profit or that losses can or will be limited in any manner whatsoever. Do NOT use this information as a substitute for your own personal market analysis. All trades described in this publication do not take into account commission fees, slippage, volatility and any other applicable risk-related factors. Past results are no indication of future performance. All investments are subject to risk that should be considered prior to making any investment decisions. Also note that stop loss orders do not necessarily limit losses or lock in profits. Depending upon market conditions, stop loss orders may be executed at prices substantially below or above the specified stop price. Additionally, stop loss orders can be ineffective and not executed during times when a market may be in a locked limit bid or offer situation. Publisher does not manage accounts for clients and has never had power of attorney over accounts trading any of the strategies or recommendations published in this newsletter. Information in this newsletter is not to be construed as an offer to buy or sell specific commodity futures or options contracts and does not purport to be a complete statement of all material facts relating to futures or options trading.

No representation is being made that any account will, or is likely to achieve profits or losses similar to those discussed within this newsletter, website and texts. My courses, products and services should be used as learning aids only and should not be used to invest real money. If you decide to invest real money, all trading decisions should be your own. Hypothetical or simulated performance results have certain limitations. Unlike an actual performance record, simulated results do not represent actual trading. Also, since the trades have not been executed, the results may have under-or-over compensated for the impact, if any, of certain market factors, such as lack of liquidity. Simulated trading programs in general are also subject to the fact that they are designed with the benefit of hindsight. No representation is being made that any account will or is likely to achieve profit or losses similar to those shown.
